EDUCATION

GEORGETOWN UNIVERSITY — August 2011 – May 2015
B.A., International Economics, Concentration in Finance — Washington, DC

EXPERIENCE

ALLIANCEBERNSTEIN L.P. — March 2022 – present
Assistant Vice President – Developer & Assistant Portfolio Manager — Nashville, Tennessee

- Designed and implemented automated data pipelines to monitor cash and treasury positions, reducing cash drag through timely, data-driven portfolio adjustments.
- Designed and supported cloud-based data pipelines for trading, treasury, and compliance workflows using Python, SQL, AWS, and Azure, processing large, time-sensitive datasets and integrating with OMS/EMS trading systems via API connections.
- Refactored and automated legacy reporting workflows into reusable, production-grade analytics tools, improving trading speed, data consistency, and compliance reliability.
- Partnered with product managers, traders, and operations teams in an Agile environment to deliver production-grade data solutions, including API integrations between internal OMS and external EMS systems, data quality validation, and performance optimization for trading workflows.
- Developed a firmwide tax-loss harvesting analytics engine, implementing quantitative logic to identify optimal share-lot selection; solution is now used across multiple investment teams.
- Led development and ongoing enhancement of a Quality Control framework for OEMS data, managing a multi-person team and owning validation logic, exception handling, and reporting.
- Manage portfolios alongside PMs, including trading, managing duration and sector/country exposure, and ensuring sufficient cash coverage.

FANNIE MAE — April 2020 – March 2022
Python Developer – Risk Analytics — Washington, DC

- Co-developed and productionized Python-based risk capital calculation engines, improving performance, numerical consistency, and usability for downstream analytics and reporting.
- Designed and maintained Python and SQL–driven ETL pipelines to ingest, transform, and validate large financial datasets, supporting batch analytics and regulatory risk workflows.
- Led migration of analytics and data-processing workloads from on-prem infrastructure to AWS, enabling scalable compute, improved reliability, and standardized deployment for a 20-person analytics team.
- Partnered with risk managers and senior stakeholders to model pricing and fee-change scenarios, translating quantitative outputs into decision-ready analyses reviewed by executive leadership.

FREDDIE MAC — January 2019 – April 2020
Python Developer – Portfolio Strategy — Washington, DC

- Co-developed and productionized a Python-based portfolio forecasting application, enabling scenario analysis and forward-looking portfolio projections for internal investment stakeholders.
- Extended the application to support user-defined assumptions on incremental purchases, designing modular logic to evaluate portfolio impacts under multiple economic and investment scenarios.

WELLS FARGO & COMPANY — August 2016 – January 2019
Credit Analyst — Washington, DC

- Created automated Python processes using legacy Excel calculations to improve efficiency.
- Led analysis on revolving credit facility deals (100m−1bn), including modeling and monitoring risk for underlying portfolios.

ACCENTURE LLP — July 2015 – August 2016
Analyst – Corporate Finance — Washington, DC

- Performed data ETL (extract, transform, load) operations and analysis for financial and other KPI data.

PROJECTS

Ozeki Analytics – https://ozekianalytics.substack.com — January 2024 – present

- Leading English language blog focused on sumo wrestling using statistical analytics

- Collect data and perform regular statistical analysis, including linear regression, logistic regression, research on optimizing features for predictivity
- Also includes public education on statistical topics including an ongoing series of companion notes for Elements of Statistical Learning

Financle – https://financle.vercel.app June 2024 – Present

- Originated idea of "Wordle for Finance" and lead programmer; responsible for all data, algorithms, and full-stack web application development using JavaScript
- Alpha stage with ongoing user testing

SKILLS & LANGUAGES

Skills: Python, SQL, AWS (S3, Lambda, EC2), Azure, ETL/Data Pipelines, API Integration, Power BI
Database Technologies: SQL Server, MongoDB, NoSQL
Financial Domain: Risk Modeling, Portfolio Analytics, Credit Analysis, Fixed Income Markets
Programming Languages: Python, SQL, JavaScript, C++
Development Practices: Agile, Git/Version Control, Code Review, Production Software Development
Languages: Chinese (HSK Level 5), Spanish (proficient), Japanese (proficient)
